

How to make Soy Silk into a fabric fusion

Gather all the materials required: Soy Silk fibre, Textile Medium, Freezer paper, tulle, paper towel and water.

Pour a small amount of Textile Medium into a cup.

Dilute the Textile Medium with water at a ratio of 1 part Textile Medium to 3 parts water.

Pull a piece of the soy silk from the roving.

Gently pull the roving apart and fluff it up.

Build up several layers of the fluffed out soy silk on the freezer paper - about 2.5cm (1") thick is a good depth, but the deeper the layer, the thicker your "fabric" will be.

Place the tulle over the soy fibre.

Pour the diluted Textile Medium over the entire surface of the soy fibre.

Gently work the Textile Medium into the soy fibre until all the fibre has been moistened.

Use the paper towel to blot the excess Textile Medium.

Remove the tulle and wash it in soapy water.

Allow the soy silk fusion fabric to dry. You can speed up drying by placing it in the sun or carefully use a heat gun.

Once dry, peel your fabric from the freezer paper and it's ready for use in your next project. Here it covers a sewing kit – even the mannequins are dressed in Soy Silk Fusion fabric.
